Summary

This is a proof of concept integration between a GitHub (GitHub, 2008) repo and figshare (figshare, 2016) in an effort to get a DOI for a GitHub repository. When a repository is tagged for release on GitHub, Fidgit (Smith, 2013) will import the release into figshare thus giving the code bundle a DOI. In a somewhat meta fashion, Fidgit is publishing itself to figshare with DOI 'https://doi.org/10.6084/m9.figshare.828487' (figshare Archive, n.d.).

Statement of need

Something profound about how this is a very important area of research...
